Listing of Claims

JAN 11 2008

The following listing of claims will replace all prior versions, and listings, of claims in the subject application:

Claims 1-13 (canceled).

14. (previously presented) A network facsimile apparatus comprising:
 - image information scanner part configured to scan an original and output image data corresponding to the scanned original;
 - display part including a predetermined display unit;
 - image data transmitting and receiving part configured to transmit and receive image data via a public network;
 - mail transmitting and receiving part configured to transmit and receive mail data via a network;
 - code determination part configured to determine whether a specific user code, specific to a current operator and differentiating said current operator from other operators of the network facsimile apparatus, has been specified;
 - subject name registration part configured to register for each of a plurality of registered user codes, corresponding one or more subject names associated with the registered user code; and
 - subject name specifying part configured to automatically specify one of the subject names registered for the specific user code of the current operator and registered in the subject name registration part, as the transmission subject name of the mail data to be transmitted.

Dkt. 2271/70770

15. (previously presented) The network facsimile apparatus as claimed in claim 14, wherein a plurality of subject names with respective specified priorities are registered for the specific user code of the current operator, and said subject name specifying part automatically specifies one of the registered subject names having a highest priority as the transmission subject name of the mail data to be transmitted.

16. (previously presented) The network facsimile apparatus as claimed in claim 14, wherein said subject name specifying part determines whether a subject name previously specified for preferential use is one of the subject names registered for the specific user code of the current operator, and if said subject name for preferential use is one of the subject names registered for the specific user code, said subject name specifying part automatically specifies said subject name for preferential use as the transmission subject name of the mail data to be transmitted.

17. (previously presented) The network facsimile apparatus as claimed in claim 14, wherein a plurality of subject names are registered for the specific user code of the current operator, and said plurality of subject names registered for the specific user code are displayed on said display part for selection by the operator.

18. (currently amended) The network facsimile machine apparatus as claimed in claim 14, further comprising

address registration determination part configured to determine whether a mail address is

Page 6

Dkt. 2271/70770

registered for the specific user code of the current operator,

wherein said subject name specifying part specifies the mail address registered for the specific user code as the transmission subject name when said address registration determination part determines that the mail address is registered for the specific user code.

19. (previously presented) A network facsimile apparatus comprising:
 - image information scanner part configured to scan an original and output image data corresponding to the scanned original;
 - display part including a predetermined display unit;
 - image data transmitting and receiving part configured to transmit and receive image data via a public network;
 - mail transmitting and receiving part configured to transmit and receive mail data via a network;
 - code determination part configured to determine whether a specific user code, specific to a current operator and differentiating said current operator from other operators of the network facsimile apparatus, has been specified;
 - address registration determination part configured to determine whether a mail address is registered for the specific user code of the current operator, if said code determination part determines that the specific user code of the current operator has been specified; and
 - subject name specifying part configured to automatically specify another subject name, based on the mail address registered for the specific user code, as the transmission subject name of the mail data to be transmitted, if said code determination part determines that the specific user code of the current operator has been specified and said address registration determination

part determines that the mail address is registered for the specific user code.

20. (currently amended) The network facsimile machine apparatus as claimed in claim 19, wherein said subject name specifying part creates said another subject name, based on the mail address registered for the specific user code.

21. (currently amended) The network facsimile machine apparatus as claimed in claim 19, wherein said subject name specifying part appends the mail address registered for the specific user code to "From".

22. (previously presented) A network facsimile apparatus comprising:
image information scanner part configured to scan an original and output image data corresponding to the scanned original;
display part including a predetermined display unit;
image data transmitting and receiving part configured to transmit and receive image data via a public network;
mail transmitting and receiving part configured to transmit and receive mail data via a network;
code determination part configured to determine whether a specific user code, specific to a current operator and differentiating said current operator from other operators of the network facsimile apparatus, has been specified;
subject name registration part configured to register for each of a plurality of registered user codes, corresponding one or more subject names associated with the registered user code;

Page 8

Dkt. 2271/70770

subject name specification determination part configured to determine whether any subject names are specified for mail data to be transmitted; and

subject name specifying part configured to automatically specify one of the subject names registered for the specific user code of the current operator and registered in the subject name registration part, as the transmission subject name of the mail data to be transmitted, if the subject name specification determination part determines that no subject name is specified for the mail data.

23. (previously presented) The network facsimile apparatus as claimed in claim 22, wherein a plurality of subject names with respective specified priorities are registered for the specific user code of the current operator, and said subject name specifying part automatically specifies one of the registered subject names having a highest priority as the transmission subject name of the mail data to be transmitted.

24. (previously presented) The network facsimile apparatus as claimed in claim 22, wherein said subject name specifying part determines whether a subject name previously specified for preferential use is one of the subject names registered for the specific user code of the current operator, and if said subject name for preferential use is one of the subject names registered for the specific user code, said subject name specifying part automatically specifies said subject name for preferential use as the transmission subject name of the mail data to be transmitted.

25. (previously presented) The network facsimile apparatus as claimed in claim 22,

Osamu SUZUKI, S.N. 10/633,976
Page 9

Dkt. 2271/70770

wherein a plurality of subject names are registered for the specific user code of the current operator, and said plurality of subject names registered for the specific user code are displayed on said display part for selection by the operator.

26. (currently amended) The network facsimile ~~machine~~ apparatus as claimed in claim 22, further comprising

address registration determination part configured to determine whether a mail address is registered for the specific user code of the current operator,

wherein said subject name specifying part specifies the mail address registered for the specific user code as the transmission subject name when said address registration determination part determines that the mail address is registered for the specific user code.
